We can provide
interfaces for the
following paint
managers and systems

iAutoFocus™ "The most innovative, cost-effective Management Software"

iAutoFocus™ provides the power to easily manage all aspects of collision repair from tracking sales and production to job costing, invoicing, repair notes, cycle times, employee efficiency, profit margins and claim processing and can be customized for even the most demanding body shop (see iAutoFocus features listed below).

WebView™ "Works with iAutoFocus to automatically post job status on the internet"

Webview is Internet integration software and the most advanced communication system available for customers and insurance adjusters to view the status of a repair or claim online. The innovative WEBVIEW technology works in stand-alone mode, with any other management software, or with iAutoFocus linked with a body shop's own web site for added automation and convenience.

Image+™ "Take advantage of advances in communication"

ImagePlus service is for shop owners who do not have a web site, or who need to modify and upgrade their shop's web site to take advantage of the latest advances in customer service and communication.
